

Corporate Finance FIN 302

Spring 2025-2026

Empirical Homework # 1

Deadline: February 25th, 2026 – 11:59 PM

Homework submitted after the due date will NOT be accepted under any circumstances.
Please submit your homework via LMS, NOT through email. Only submissions through LMS will be accepted.

Go to investing.com and search for Colgate-Palmolive (Ticker symbol: CL).

Select “Historical Data” from the “General” menu and download monthly price data for the recent 5 years (2021 - 2025). Hint: Don’t forget to set the time frame to “Monthly” and adjust the time range accordingly. Download the CSV file and import it to Excel.

Use the first column “Price” to compute monthly return.

- 1- Create a line graph in excel where you put “monthly date” on x-axis and “return” on y-axis.
- 2- Compute the average return and standard deviation for each year (from 2020 to 2024). Hint: Prepare a table with three columns. Put year in the first column, average return (in percentage) in the second column and standard deviation in the third column.

Remarks:

1. Excel sheet will NOT be accepted. Copy your graphs to a word document and don’t forget to give a title, label your axes...etc.
2. Answer each question specifically. There will be 25% of penalty if you don’t prepare it in a clean and understandable way.
